Geological setting

Geotectonic Units of Central Balkan

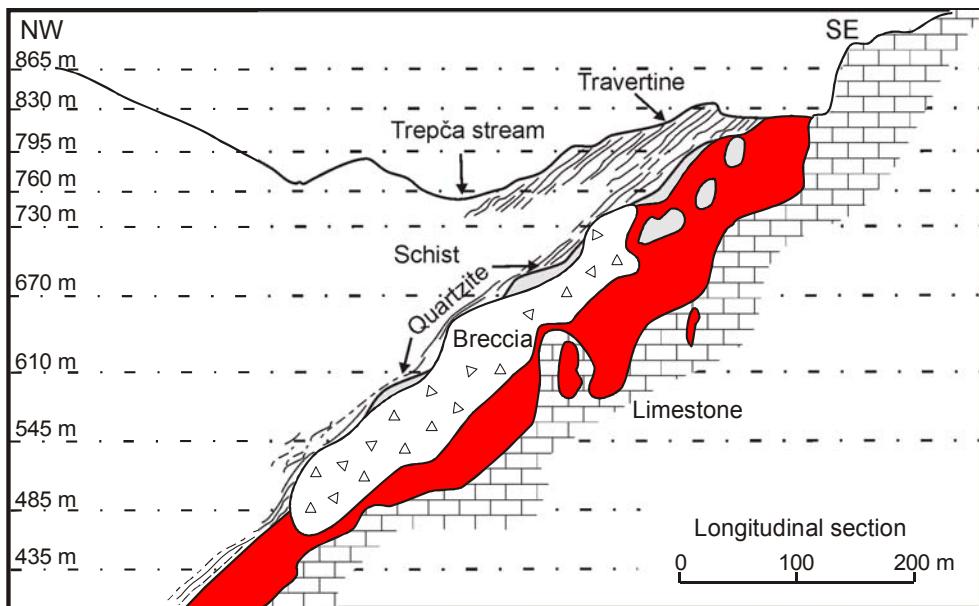

Scale approx. 1 : 3,500,000

Geological setting

Stari Trg mine/Trepča – host rocks

Stari Trg mine – volcanic rocks

The deposit is related to intensive Neogene magmatism within the Western ophiolitic Vardar zone, in the easternmost part of Dinarides.

Contact quartz latite-breccia

Quartz latite

Stari Trg mine – volcanic rocks

Caldera

Caldera – satellite photo image

Travertine

Stari Trg mine – breccia

Milled breccia within limestone
Level X.

Breccia with fragments of schist and marble...

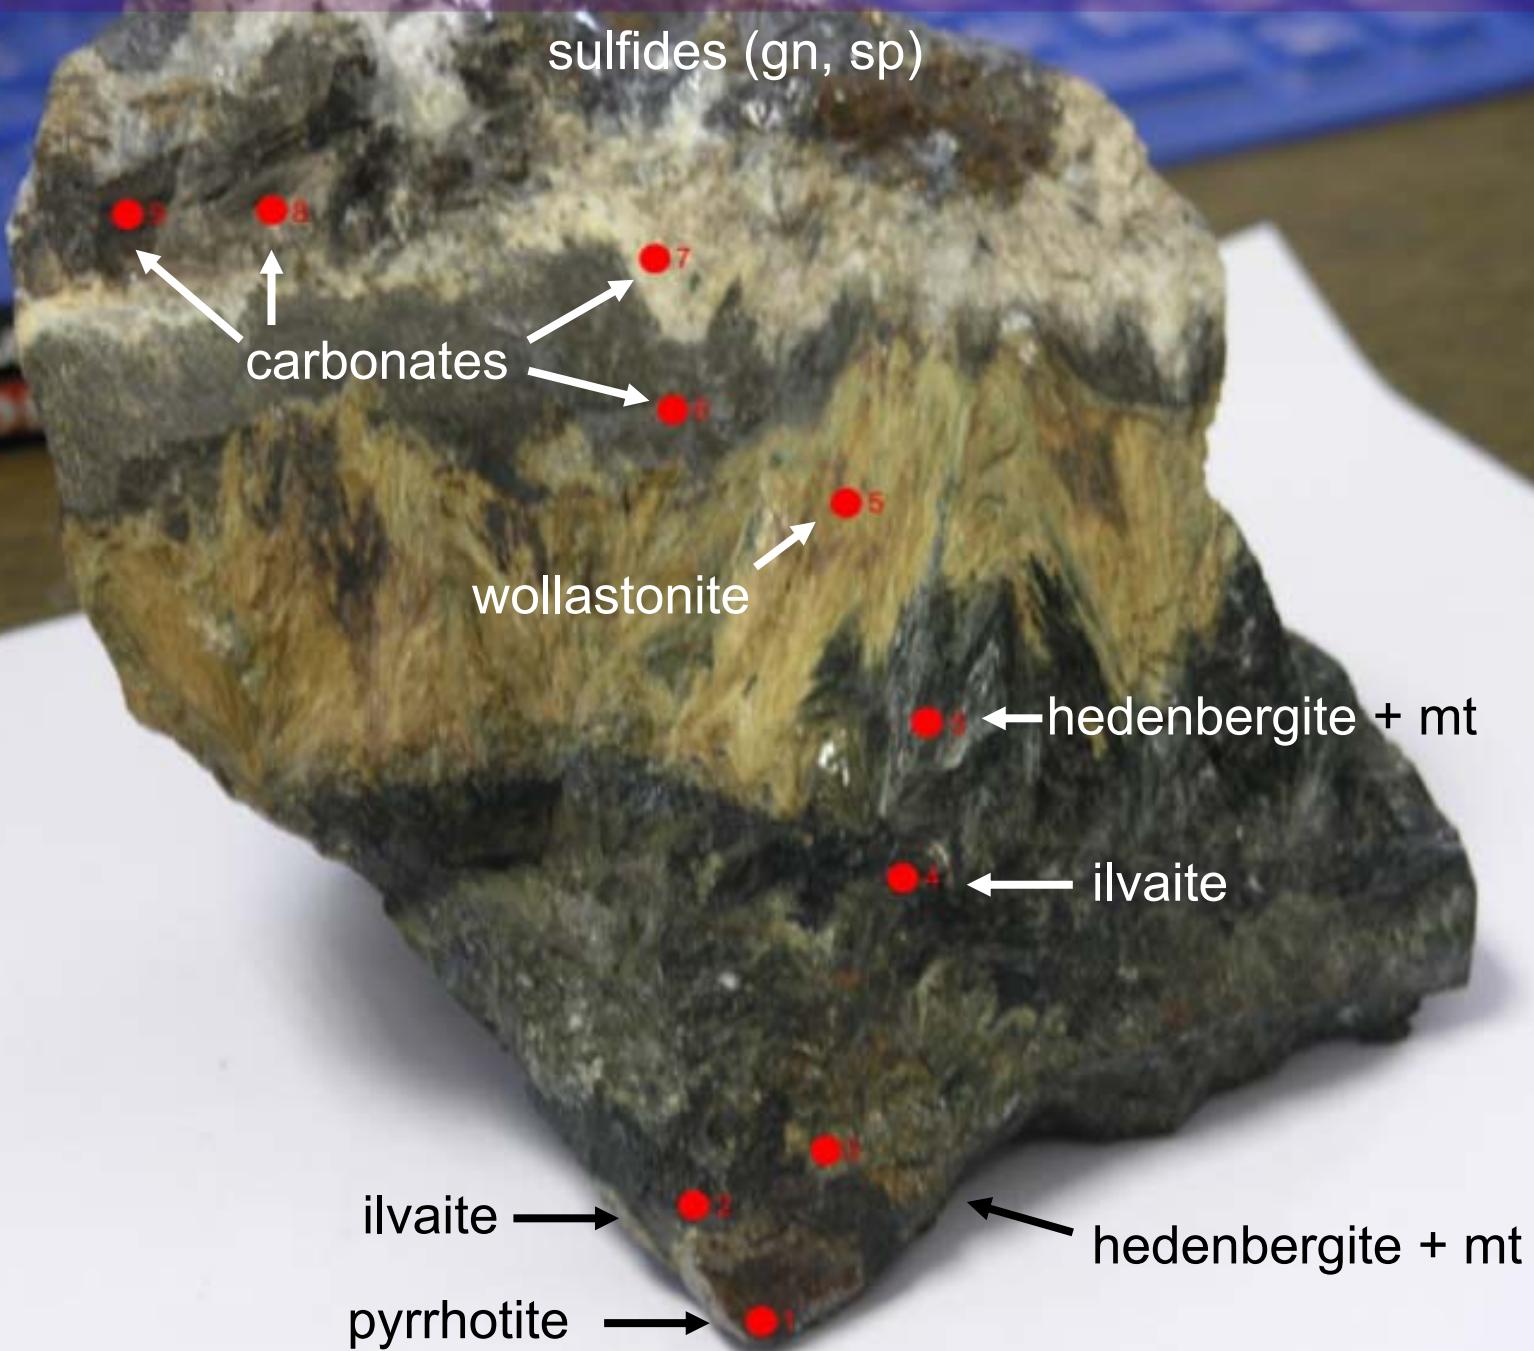

Mineralized fragment within breccia
Level X.

...and with fragments of sulfides (Po, Py)

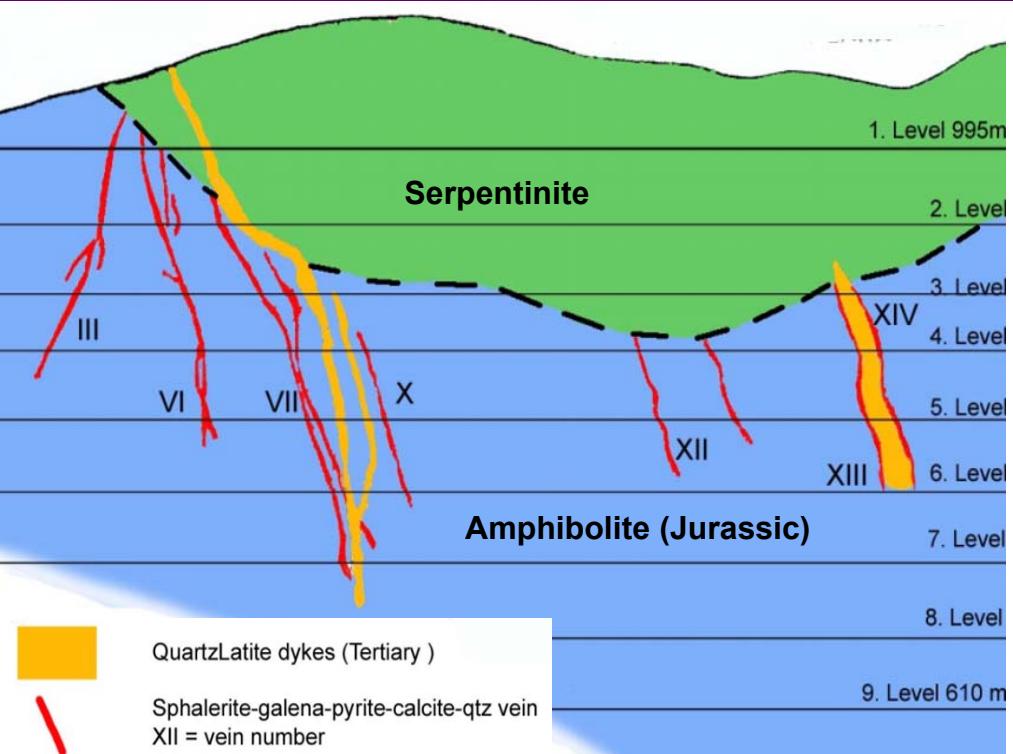

Starí Trg mine – Skarn mineralization

Stari Trg mine – Hydrothermal mineralization

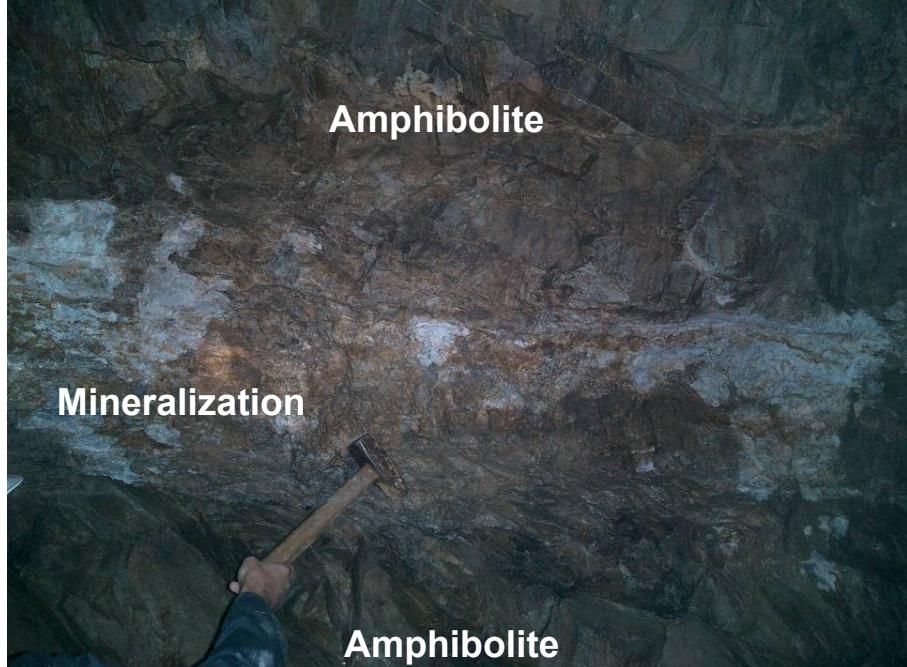

Crnac mine – host rocks

Listwaenite, Level IV.

Host barren amphibolite, Level V.

Host amphibolite with sulfide mineralization, Level V.

Crnac mine – volcanic rocks

Quartz latite

Ore vein no. 13

1 m

Crnac mine –mineralization

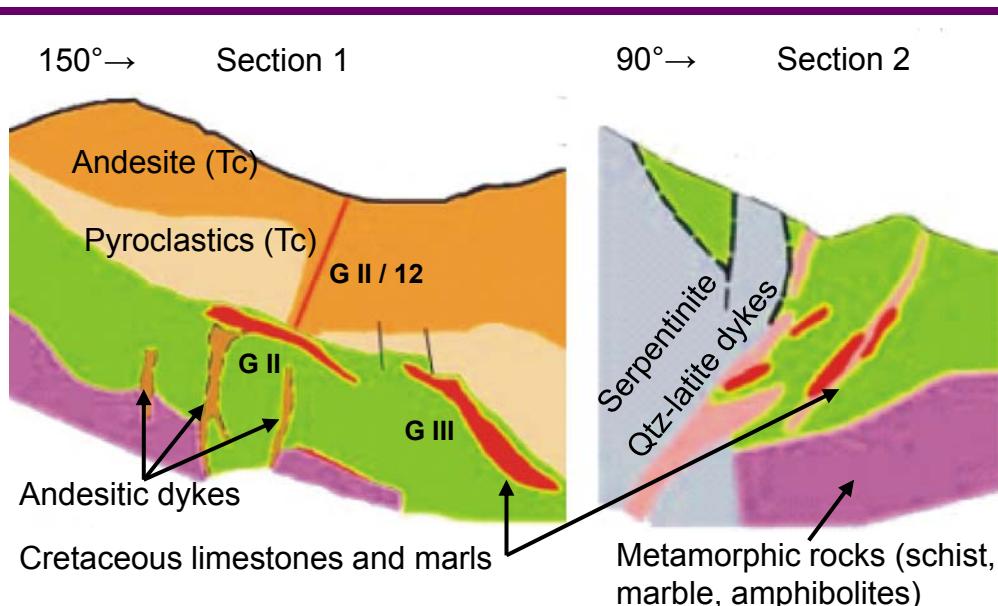

Listwaenite mineralization

Vein mineralization

Belo Brdo mine – host rocks

Disseminated pyrite and galena in mm-sized quartz veins which are cutting hydrothermally altered volcanic host

Chloritised andesitic host with intense stockwork quartz-calcite veins.

Belo Brdo mine – volcanic rocks

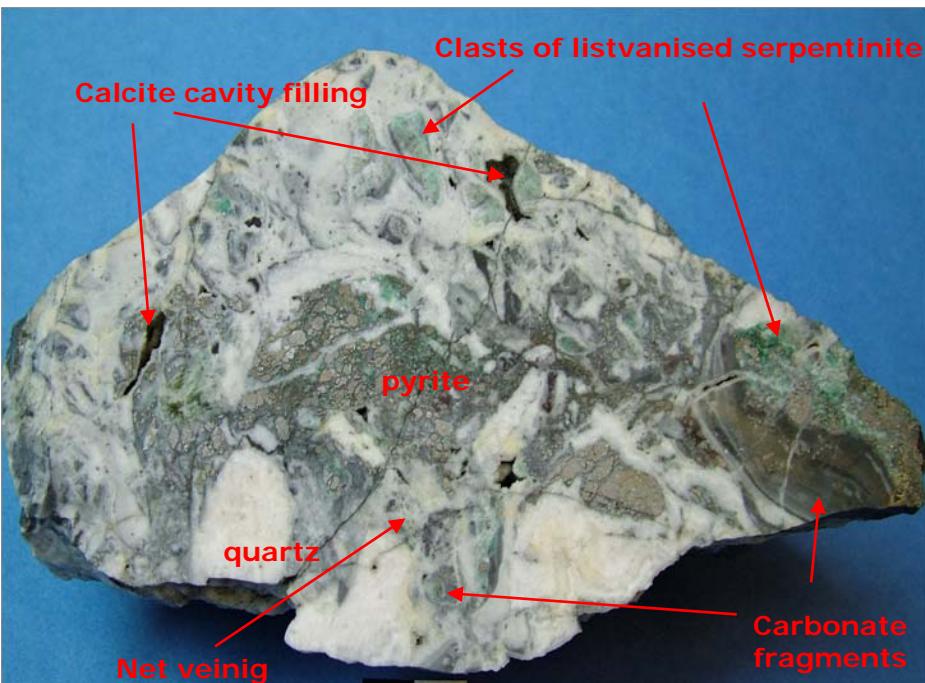

Phase I volcanism: Andesites

Phase II volcanism: stockwork of pyrite veins in contact of quartz-latite dyke and ophiolitic melange

Belo Brdo mine – mineralization

Hydrothermal breccia developed within a quartz-carbonate stockwork structure at serpentinite and carbonate contact.

“Rhythmically” banded mineralization from vein ore body. Pyrite-sulphides-pyrite-quartz.

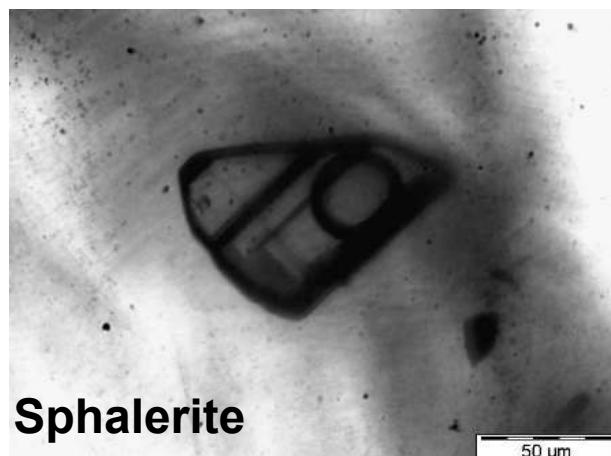

Replacement texture. Fine-grained and coarse-grained granulated pyrite (brass yellow) replaced by galena (grey). Also quartz and calcite vugs

Star Trg mine – fluid inclusion data

Mineral	Composition	Th (°C)	Salinity (wt. % NaCl eq.)
Hedenbergite (skarn)	NaCl-KCl-H ₂ O	385 - 410	14.8 - 16.5
Sphalerite (skarn)	NaCl-H ₂ O	295 - 315	7.6 – 9.6
Sphalerite (hydroth.)	NaCl-H ₂ O	240 - 300 *	7.6 - 14.8
Quartz (skarn)	CaCl ₂ -NaCl±KCl-H ₂ O	305 - 350	8.1 – 12.0
Quartz (hydroth.)	CaCl ₂ -NaCl±KCl-H ₂ O	295 - 310	4.5 – 7.5
Carbonate (breccia)	CaCl ₂ -NaCl-H ₂ O	235 - 262	22.2 – 32.4
Carbonate (skarn)	CaCl ₂ -NaCl±KCl-H ₂ O	>T _{decrip.}	9.9 – 11.1
Carbonate (hydroth.)	CaCl ₂ -NaCl±KCl-H ₂ O	>T _{decrip.}	4.5 – 7.5

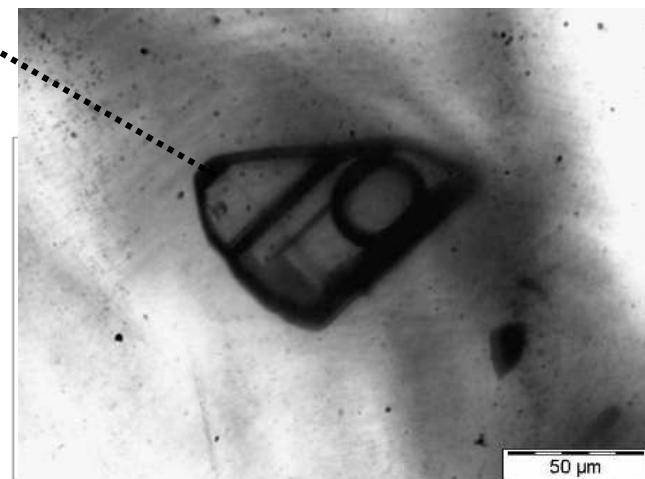

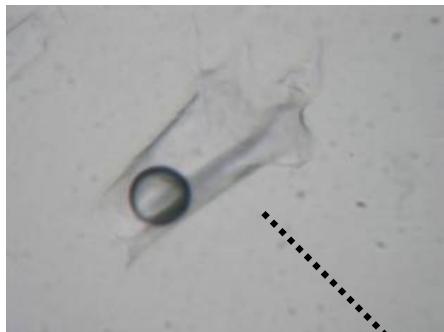

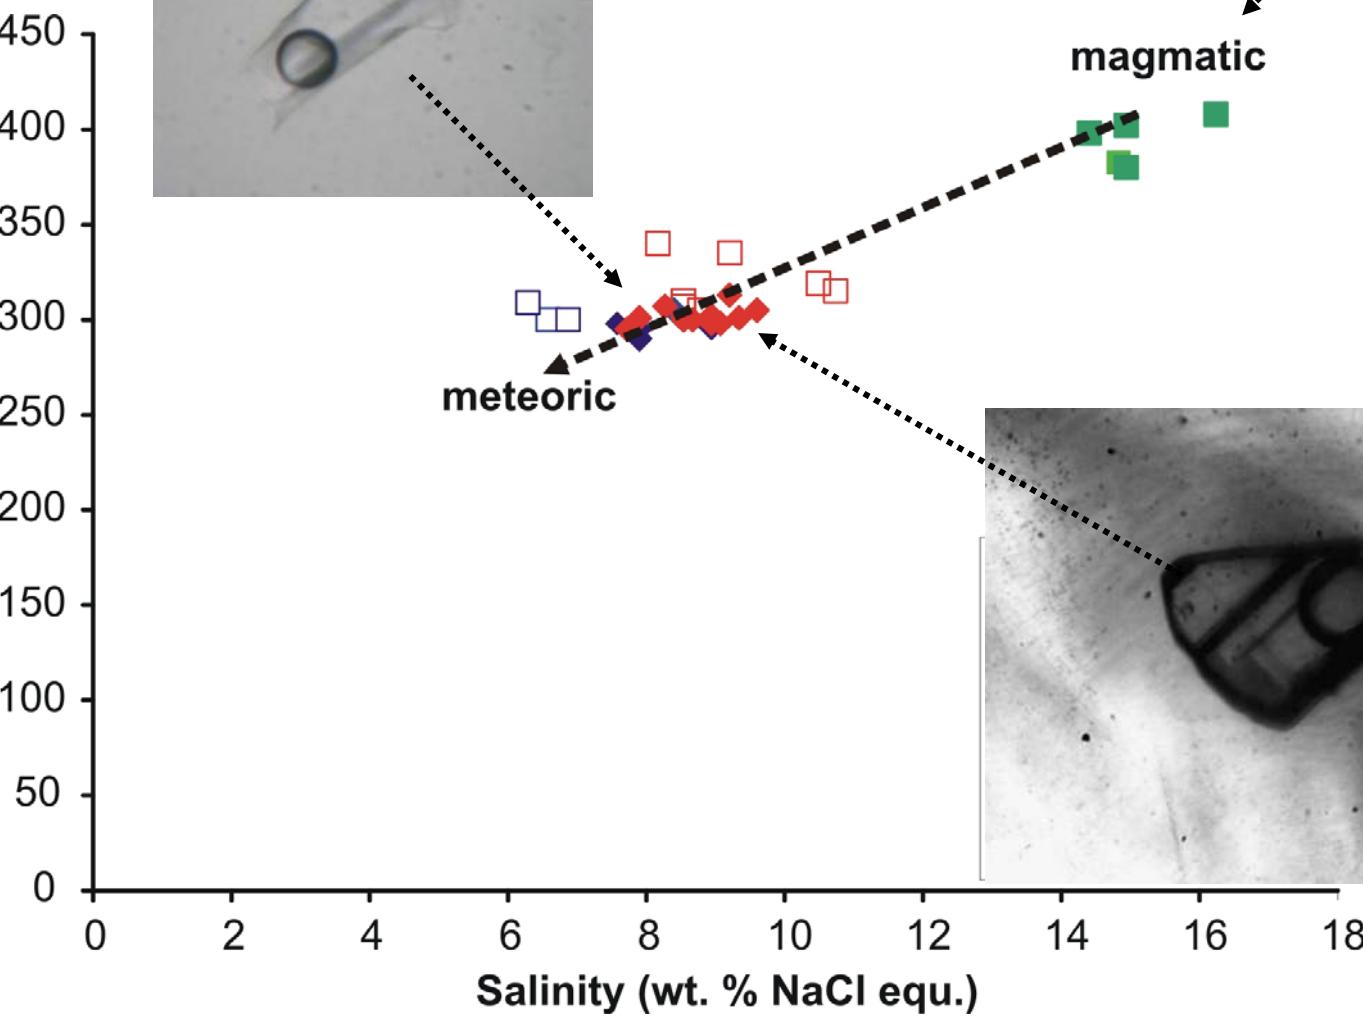

* Negative thermal gradient of approximately of 20° /m between level X. (+75m) and V. (+375m) is estimated according to FIs data from sphalerite.

Hedenbergite

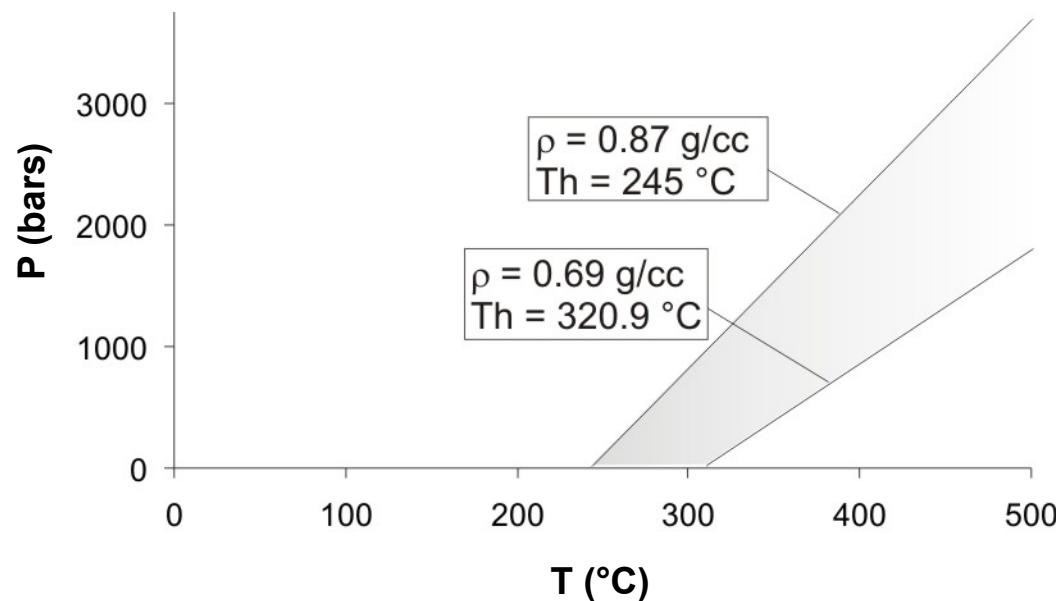

Star Trg mine – fluid inclusion data

Homogenization temperature / °C

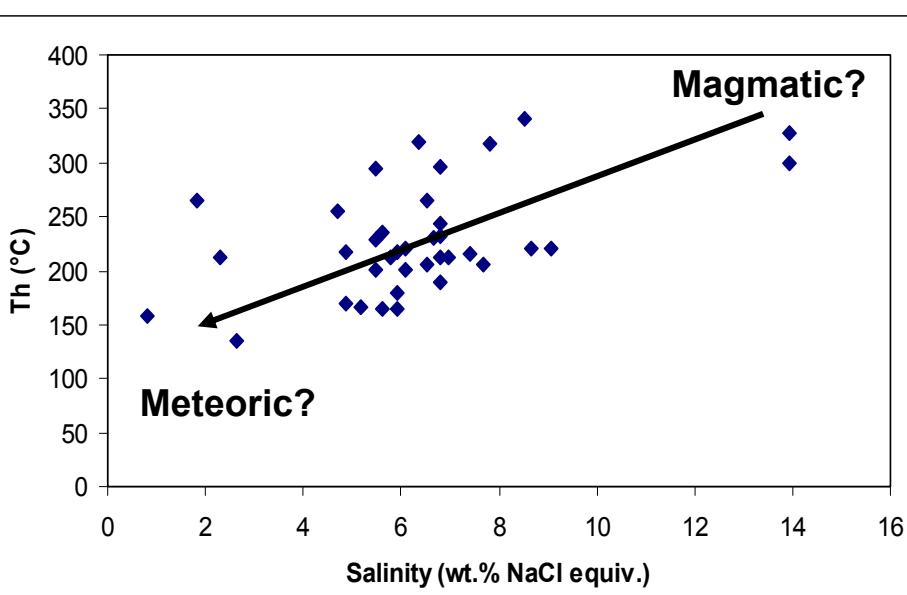

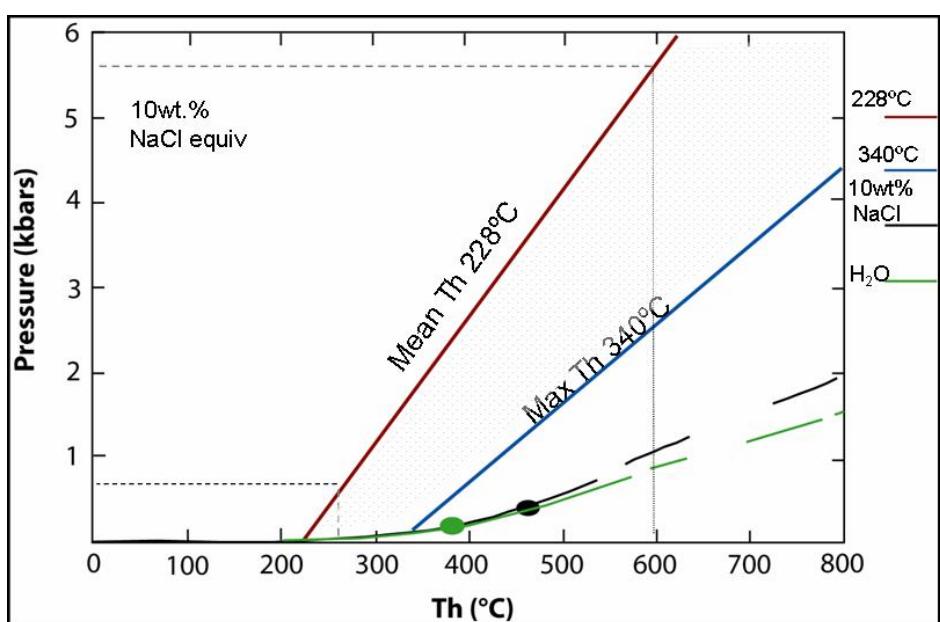

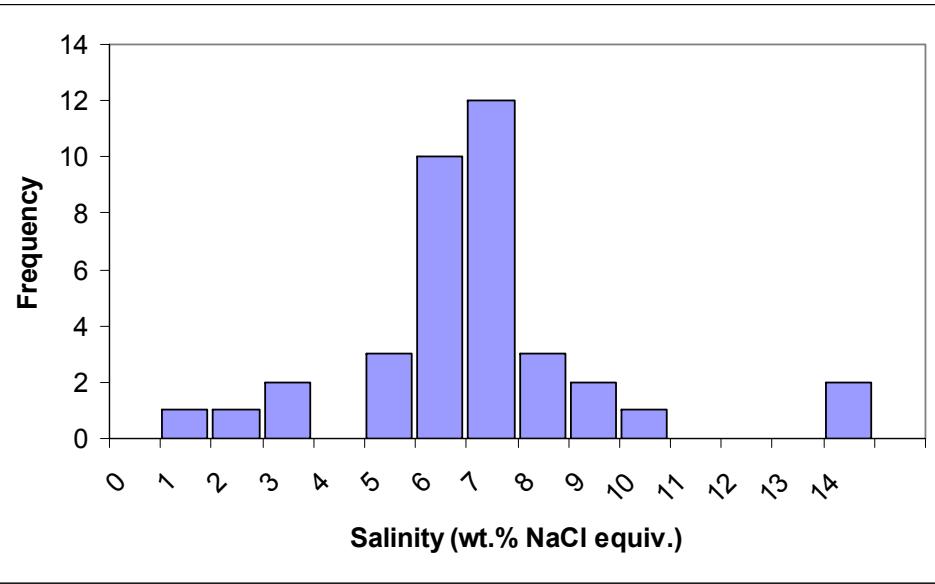

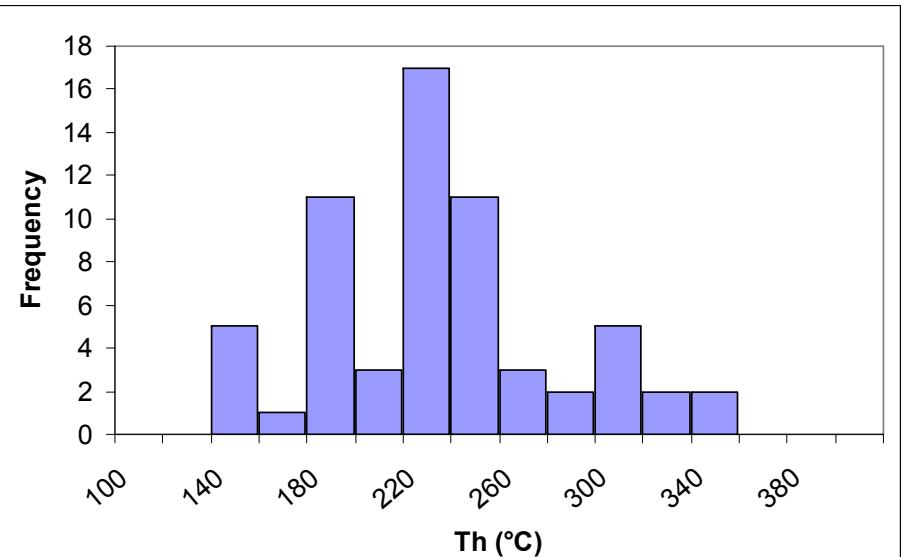

Crnac mine – fluid inclusion data

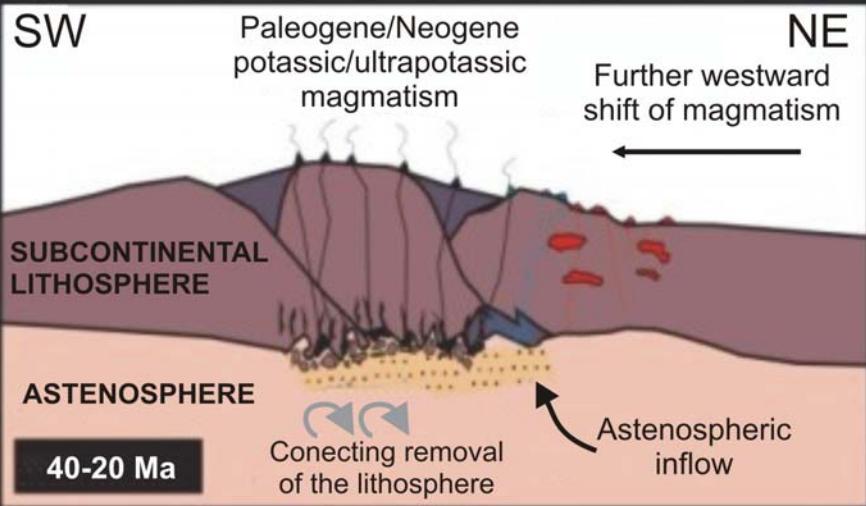

Mineral	Inclusion generation	Composition	Th (°C)	Salinity (wt. % NaCl eq.)
Quartz (listwaenite)	P	NaCl-H ₂ O	249 - 324	2.9 – 6.7
Carbonate (listwaenite)	P	CaCl ₂ -NaCl±KCl-H ₂ O	247 - 325	5.1 – 7.0
Carbonate (listwaenite)	PS	CaCl ₂ -NaCl-H ₂ O	219 - 250	4.3 – 4.9
Carbonate (listwaenite)	PS	NaCl-CO ₂ -H ₂ O	268	11.7

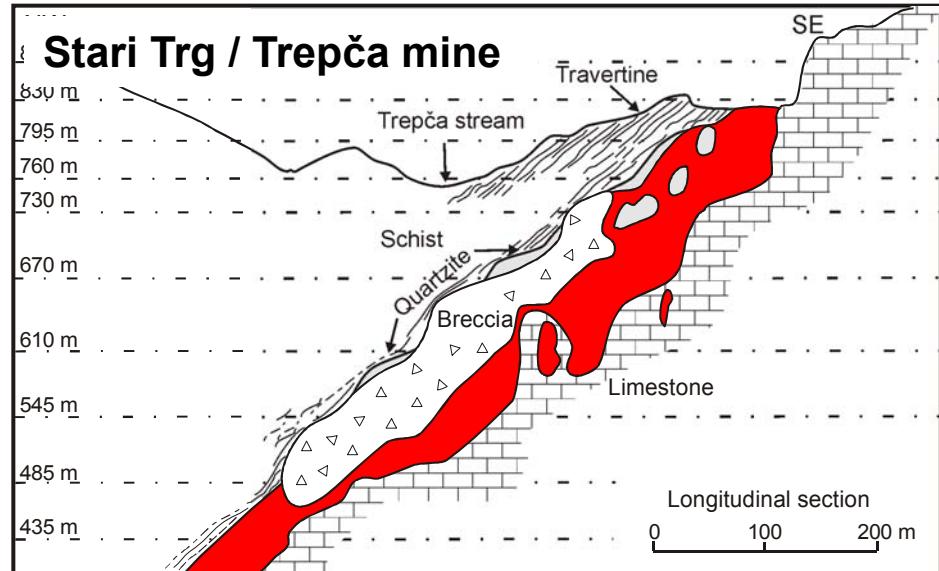

Belo Brdo mine – fluid inclusion data

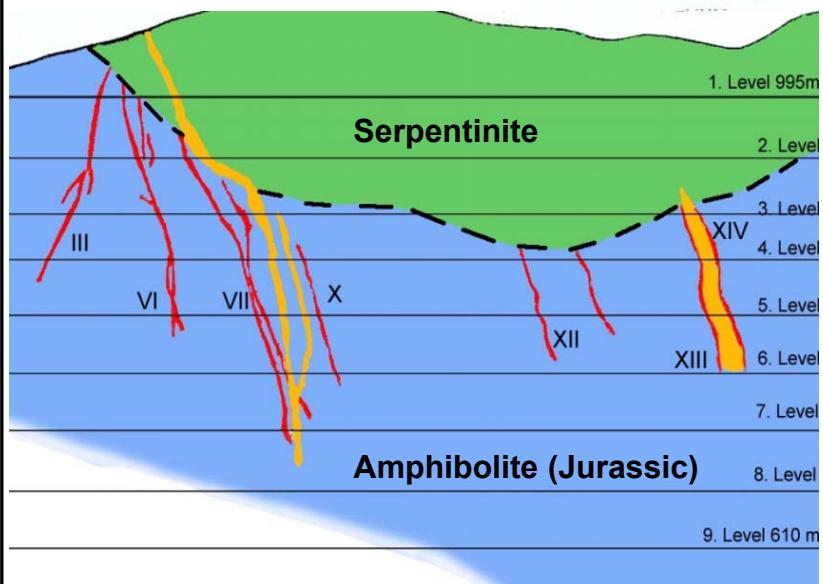

Conclusion

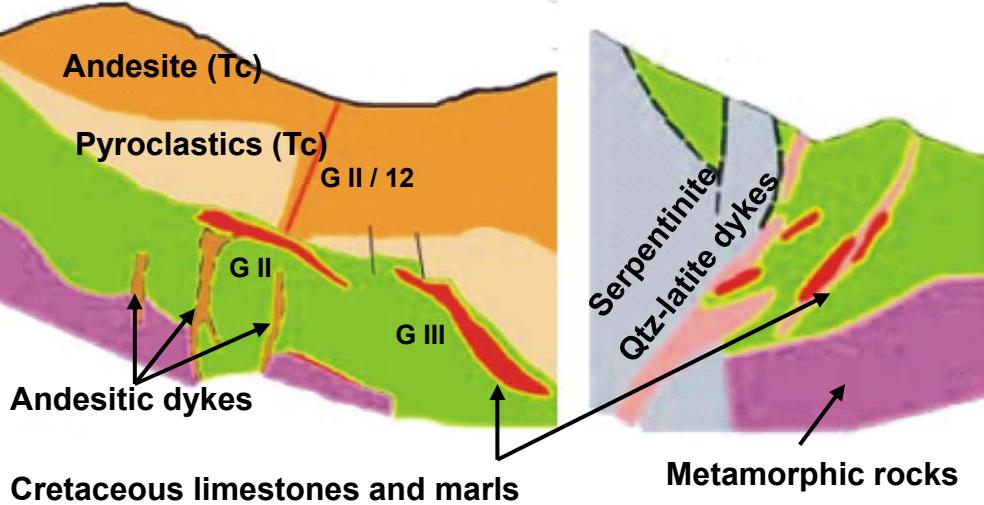

Cvetković et al., 2004

Crnac mine

Belo Brdo mine

Applied methods

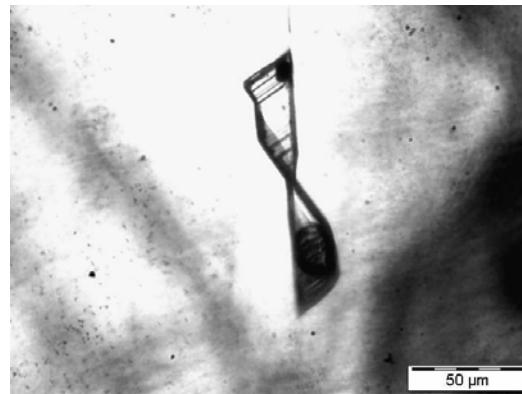

Host rocks

- carbonates
- $\delta^{18}\text{O}$ vs. $\delta^{13}\text{C}$
- $^{87}\text{Sr}/^{86}\text{Sr}$
- geochemistry
- amphibolites
- geochemistry
- Ar/Ar dating

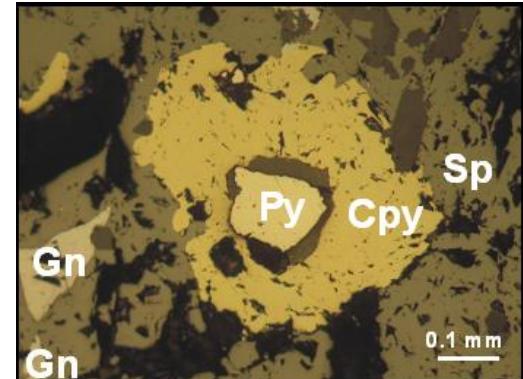

Volcanic rocks

- K/Ar dating
- Ar/Ar dating
- geochemistry

Ore minerals

- Ore microscopy
- Microprobe
- SEM/EDX & SEM/WDS
- $\delta^{34}\text{S}$
- fluid inclusions within sphalerite

Gangue minerals

- fluid inclusions
- $\delta^{18}\text{O}$ (silicates)
- geochemistry
- $\delta^{18}\text{O}$ vs. $\delta^{13}\text{C}$ and $^{87}\text{Sr}/^{86}\text{Sr}$ (carbonates)

Fluid inclusions studies

- microthermometry
- chemistry of leachates
- LA-ICP/MS
- δD vs. $\delta^{18}\text{O}$
